It is early time teachers in Uganda to join the technology and shift from chalk board work,

machines like computers,projectors can do the work chalk board does better and very effective

provided the teacher using them is well equipped with all the skills necessary so allow me to join hands

and thank the ITCT Africa for all the effort ,time,money and all the materials they have put in so far to lift a Ugandan

teacher to a level of a teacher in well developed countries.when technology is invested in a teacher am sure

by the end of the day we are going to see that farmers,traders,doctors,cleansers,drivers and all other people in the whole

Uganda find using technology as the best and effective mean of doing things
